Createspace, United States, 2014. Paperback. Book Condition: New. 279 x 216 mm. Language: English . Brand New Book ***** Print on Demand *****.This report is part of a series of updates of technical issues concerning fitness for duty in the nuclear power industry. It discusses technologies relevant to the detection and management of two key elements of a fitness-for-duty program: drug and alcohol testing and fatigue management. On drug and alcohol testing, the report provides an introduction to the pharmacokinetics of drugs of abuse in different bodily fluids and substances (matrices), a review of the technologies used to separate, identify, and quantify drugs in workplace drug testing programs, and a description of emerging research in developing and validating the technology systems capable of testing alternative matrices as well as newly appearing drugs of abuse, both in the laboratory and at the point of collection. On fatigue management, the report reviews recent research on sleep and fatigue, describes efforts under way to develop and deploy technologies to aid fatigue assessment and management, reviews the status of fatigue management in industries and governmental sectors where fatigue is a significant safety concern, and discusses implications for the nuclear power industry. Finally each chapter includes an extensive bibliography of documents to support further, more in-depth reviews.
