Calculations of inorganic chemistry and qualitative analysis

By Alexander Smith

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 28 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: . . . These formulae represent the weights of equal volumes (22.4 l.), namely 36.46 g. and 44 g., respectively. Hence the former gas is a little lighter. Remembering that the G. M. V. of air weighs 28.955 g., we can compare the weight of any gas with that of air in the same way. Example 27. What are the relative weights of acetylene (C_2H_2) and sulphur dioxide SO_2 as compared with air The G. M. V. cube holds formula-weights of the first two, namely 26 g. and 64 g., and 28.955 g. of air. Hence acetylene is a little lighter than air, and sulphur dioxide more than twice as heavy. Applications: To Cases of Dissociation. Several gases or vapors yield smaller values for their densities, and therefore molecular weights, when the densities are measured at higher temperatures. This indicates...
