Excerpt: . . . nine days; all being dead in twelve daysv ATTACKING THE WOOD Flat Headed Lorer. (Chrysobotris Femorata) Round Headed Borer (Sperba Candida). These have done much damage to trees and the former is more common than the other. They vary somewh. it in habits but the best preventive consists in coating the bark of the trunk and larger limbs with a strong deterrent wash in June. The presence of borers in the wood may generally be ascertained by the borings or sawdust like casting thrust out from the burrows and the worm may then be cut out with a stout wire or knife. Flat appletree borer: a grub, b pupa, c enlarged head, and following segments, d beetle. ATTACKING THE BARK The Oyster Shell Bark L. iuse (Mytilaspis Almi.) Found everywhere throughout tha province anJ inflicts a large amount of damage on apple trees and...
