Filesize: 1.99 MB

Reviews

This is actually the very best book i actually have read till now. This is for all those who statte that there was not a worth studying. Its been written in an remarkably straightforward way which is merely following i finished reading this publication by which in fact altered me, modify the way i believe.

(Mr. Jeramy Leuschke IV)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: .cent. For a general formula, then, we may use the fraction k , and then, assume for particular classes of localities, a mean value of k , provided the variation of humidity in any proposed class of localities is not too great. Using the general value, k of the humidity, we may correct the reading of the barometer so that it may be used in the formula for density, as follows: Let p be the reading that would, if produced by dry air, pertain to the actual density for which a barometric reading p is recorded; then, p_v being the vapor-pressure at the time, $P = P. + P_v = P - fP_v = P - kF$ (4) For a barometric pressure p , for dry air, we have from (2) $d p$ 492 lb) Using with this formula the values of the readings for standard conditions; viz: bar: 29.5275; ther. 59; $k =$ we have representing the standard density by $H_t S$, 29.4335 492 since $F = 0.50$, for standard conditions. Dividing (5) by (6), member by member, we have 5, l 1 460 + $t x = L8-y$ 6--0--=TiEP (7) From this foimula, we might compute a table of values of- y -for any assumed mean percentage of saturation; e. g., for $k =$ o that is, for dry air; or for k , i. e. 50 saturation, or as in Artillery Notes No. 25, for 78 r. h. Taking k as, which approximates sufficiently to the latter for all practical purposes, our formula...
